DETAILED ACTION

Allowable Subject Matter

Claims 1-24 are allowed in view of the prior art.

The following is an examiner's statement of reasons for allowance:

As for claim 1, the prior art of record, taken either alone or in combination, fails to disclose or render obvious an optical system for sensing net global motion components in a scattering medium, the system comprising a wavefront-reversal device that collects light propagated through the scattering medium and returns a conjugated light beam, and an optical detector that detects and processes the conjugated beam, in combination with the rest of the limitations of the above claim.

As for claim 10, the prior art of record, taken either alone or in combination, fails to disclose or render obvious an optical system for suppressing noise components produced by a scattering medium, the system comprising a phase-conjugate mirror that collects light propagated through the scattering medium and returns a conjugated light beam, and a coherent optical detector that detects and processes the conjugated beam, in combination with the rest of the limitations of the above claim.

As for claim 14, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a remote sensor, the system comprising a wavefront-reversal device that collects light propagated through the scattering medium and returns a conjugated light beam, and an optical detector that detects and processes the conjugated beam, in combination with the rest of the limitations of the above claim.

Art Unit: 2877

As for claim 23, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a method for sensing net global motion components in an ensemble of dynamically moving scattering sites, the method comprising passing an output beam through a scattering medium, forming a return beam with a wavefront from the output beam, wavefront matching the wavefront of the return beam with the wavefront of the output beam, passing the return beam back through the medium, and extracting the desired motion component from the return beam, in combination with the rest of the limitations of the above claims.

As for claim 24, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a method for suppressing noise components in an ensemble of dynamically moving scattering sites, the method comprising passing an output beam through a scattering medium, collecting, with a wavefront-reversal device, the passed through light in order to return a conjugated beam, detecting the conjugated beam reflected from the scattering medium, and extracting the desired motion component from the return beam, in combination with the rest of the limitations of the above claims.

In particular, please see the applicants' arguments of record dated April 24, 2006 in response to the previous Office Action.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
